EDUCATION

Universidad Veracruzana, México — B.S. Software Engineering — Aug 2023 - Jan 2028 — GPA: 9.2/10
Relevant coursework: Object-Oriented Design & Programming, Data Structures, Web & Network Systems Development, Database Systems, Software Requirements & Design, Security Aspects for Software Development, Artificial Intelligence, Software Testing & Deployment

EXPERIENCE

Software Engineer — Academic Schedule Management System (SIGHA)
Universidad Veracruzana · Extracurricular *Feb 2026 – Present*

- Led project development, from requirements analysis and business rules to system design, implementation, and testing, initially working as the sole developer for six months.
- Implemented the system using React and Firebase, coordinating contributions from a six-person team while updating technical documentation, architecture; determined technology and deployment constraints.
- Managed ongoing client collaboration and validation, translating stakeholder needs into technical requirements, implementing iterative corrections and improvements throughout development.

Web Developer — DuoLab *Independent Project · Jun 2026 - Sep 2026*

- Built and deployed a public laboratory website using Astro and Cloudflare, achieving a Lighthouse performance score of 95.
- Designed the backend for a results-management portal, implementing 20 REST endpoints with Hono and Cloudflare services; portal development is separate from the live public website.

Technical Writer — VitalDM *Universidad Veracruzana · Feb 2026 - Aug 2026*
Authored two user manuals for patients and physicians, documenting workflows for the system's mobile and web applications.

PROJECTS

Real-Time Employee Tracking System *University Project · Feb 2026 - Jun 2026*
Designed the relational database schema and developed around 50+ REST API endpoints using NestJS and PostgreSQL to process real-time location data for a simulated workforce

ML Classifiers *University Projects · 2025 - 2026*
Developed classification models with Python and scikit-learn, including NLP preprocessing, class balancing, algorithm comparison, and threshold tuning to prioritize Recall in a screening model; built an interactive Streamlit interface.

ATM Simulator with LAN Support Chat *University Project · Jun 2024*
Built a client-server ATM simulator in Java using TCP sockets, implementing concurrent connections and real-time LAN communication for customer support.

SKILLS

- **Programming languages:** Java, Javascript, Typescript, SQL, Python
- **Frameworks & tools:** Spring Boot, Astro, React, Node.js, PostgreSQL, Firebase, Git, Github, Github Actions, Docker, Linux, Render, Netlify, Cloudflare, Visual Studio Code, Vite, Gemini, OpenAI, Anthropic, Copilot,
- **Languages:** English (B2), Spanish (Native)
